

Hello Spring!

A Message from the Head of School

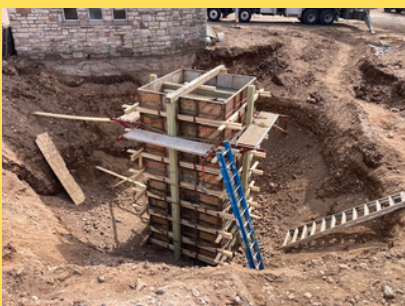

As Northern Wisconsin shakes off the long winter, we are reminded that spring is a time of awakening and renewal—a season where God reveals His promise of growth. At Firm Foundation Academy, we are witnessing that same renewal as our vision for a trades-based, technical education takes root. We are thrilled to share that we have officially enrolled our first 20 students. This milestone is a testament to the community building around us, and we are humbled by the trust these families have placed in our mission.

As we prepare for our opening this fall, we are currently searching for passionate full-time teachers and part-time classroom aides to join our team. We are looking for individuals dedicated to building both skill and character in our students. See the details of who we are looking for and how to get more information by visiting the “Hiring Now” section of the newsletter.

Finally, we look forward to a significant announcement in the coming weeks: the introduction of our permanent Head of School. It has been a privilege to lay this foundation, and I am excited for the leadership that will guide Firm Foundation Academy into a bright future.

With Gratitude and Thanks, Mark Corey Interim HOS

Cultivating Growth: The Value of a School Greenhouse

As we look toward the future of Firm Foundation Academy, we are excited about the hands-on learning opportunities a greenhouse offers. More than just a glass structure, a greenhouse is a living laboratory that adds immense value to our educational programs:

Integrated STEM Learning: A greenhouse brings abstract concepts to life. Students can study botany, biology, and chemistry in a real-world setting, witnessing firsthand how light, soil, and water interact to sustain life.

Practical Trade Skills: Aligned with our focus on technical and trades-based education, a greenhouse provides a platform to teach horticulture, irrigation system design, and sustainable agricultural practices—skills that are increasingly vital in today's economy.

Stewardship and Responsibility: Managing a greenhouse teaches patience and diligence. By caring for plants from seed to harvest, students learn the value of stewardship and see the direct, tangible result of their labor.

Community Connection: A greenhouse can become a source of produce for our cafeteria or local community programs, bridging the gap between classroom work and the needs of the real world.

By integrating this space into our curriculum, we provide our students with a unique environment that nurtures their minds and their connection to the earth, ensuring that their education is as vibrant as the garden they help grow.

We are Hiring!!!

Teachers

- Full Time
- Four Year Degree Required
- No Teacher Certification Required

Tech Aides

- Part Time Afternoons
- Skilled Trades or Tech Ed Experience Required
- Love for Teaching

Apply Now

- Visit our Website at... firmfoundationacademy.com
- Send Resume and Cover Letter to mcorey@firmfoundationacademy.org
- TechEd Teachers strongly encouraged to apply.
